MECHATRONICS AND ROBOTICS

S.A. Goll, V.E. Korneev, T.N. Nguyen. OPTIONALLY CONFIGURABLE, SCALABLE COMPLEX OF UNIVERSAL POWER CONTROLLERS AND MULTISENSOR CONVERTERS FOR MOBILE ROBOTICS

Key words: electric drive, power controller, interface, mobile robot, onboard IMS, feedback.

This paper is about advanced optionally configurable and scalable hardware tools for mobile robotics which structure and functionality is based on the requirements of the objects of control - electromechanical actuators, feedback components, projected mechatronic system with onboard IMS5

S.A. Goll, T.N. Nguyen, A.A. Pogudaev. UNMANNED CONTROL SYSTEM HARDWARE FOR UNMANNED VEHICLE WITH MANUAL GEARBOX

Key words: unmanned vehicle, electric drive, power controller, interface, autopilot, onboard IMS.

This paper is about unmanned vehicle «GAZelle BUSINESS» autopilot system hardware structure with electromechanical subsystem, onboard IMS, mechanical subsystem, power supply subsystem, computer subsystem and car safety subsystem.....12

V.I. Zhulev, V.S. Leushkin, T.N. Nguyen. REAL-TIME TRAJECTORY PLANNING FOR UNMANNED GROUND VEHICLE

Key words: real-time trajectory planning, unmanned ground vehicle, autonomous control, rapidly-exploring random tree (RRT).

As discrete-state path planning algorithms are not well-suited for unmanned ground vehicle path planning due to continuous-space system state vector and motion constraints, in this article we propose an algorithm based on rapidly-exploring random tree method. Characteristics of realization and the results of practical application of given algorithm are described..... 18

J.S. Glazunova, S.A. Goll, V.S. Leushkin, T.N. Nguyen. UNSCENTED KALMAN FILTER FOR UNMANNED GROUND VEHICLE POSITION ESTIMATION

Key words: Unscented Kalman filter (UKF), mobile robot navigation, unmanned ground vehicle, unscented transform.

This paper is about disadvantages of linear Kalman filter and extended Kalman filter for real-world application. We described basic UKF algorithm and proposed filter for unmanned ground vehicle position estimation. Also we provided experimental results of implemented filter performance.....23

V.V. Artemkin, S.S. Luksha, A.Yu. Malikov. THE «FOLLOW ME» SCENARIO REALEASED BY CONTROL SYSTEM OF UNMANNED GROUND VEHICLE USING LIDAR AND VISION SENSOR DATA

Key words: LIDAR, vision sensor, the «follow me» scenario, unmanned vehicle.

This paper is about solving problem of searching visual tags and overcoming obstacles using LIDAR and vision sensor data. The analysis of the applicability of various types of sensors to accomplish the task is given.....28

A.G. Borisov, S.A. Goll, S.S. Luksha. EFFECTIVENESS ANALYSIS OF THREE-DIMENSIONAL LASER SCANS PROCESSING ALGORITHMS IN PROBLEM OF BUILDING MAPS FOR MOBILE ROBOTS NAVIGATION

Key words: three-dimensional laser scanners, navigation, localization, mobile robot, three-dimensional digital map.

This paper is about improving efficiency of building three-dimensional maps for robotic platform navigation. Various pre-processing algorithms of data from three-dimensional laser scans, as well as some characteristics of the algorithms for comparing scans are studied in this paper 34

T.N. Nguyen. CLUTCH AND ACCELERATION ELECTRIC DRIVE FUZZY CONTROLLER FOR UNMANNED VEHICLE LAUNCH CONTROL ON INCLINED SURFACES

Key words: fuzzy logic, autonomous control system, electric drive, membership function.

This paper is about fuzzy control for clutch, acceleration and brake in unmanned vehicle to start from horizontal and inclined surfaces 42

A.G. Borisov, S.A. Goll, V.E. Korneev. OPENSOURCE HARDWARE PLATFORM FOR UNMANNED VEHICLE SOFTWARE TESTING

Key words: autopilot, unmanned vehicle, onboard IMS, open source hardware platform, gearmotor.

In this paper you can find description of robotic platform with B-class car overall dimensions with advanced onboard IMS, documented logic level interface. The platform is developed for unmanned vehicle autopilot software testing 50

I.S. Glazunova, A.A. Pogudaev. RESEARCH METHODS FOR IMPROVING THE LOCALIZATIONS ACCURACY OF GROUND OBJECTS USING MULTIPLE GLONASS / GPS-RESEIVERS

Key words: navigation system, accuracy of localization.

The methods of improving the localizations accuracy of ground objects using GLONASS / GPS receivers have been considered. A comparison of differential correction method and averaging method of satellite navigation systems signals has been carried out. The character of the error in determining coordinates of GLONASS / GPS modules has been defined 56

ELECTRONICS

V.S. Gurov, M.V. Dubkov, M.A. Burobin, I.A. Kharlanov. MASS PEAK SHAPE OF MONOPOLE MASS ANALYZER CONSIDERING REFLECTED IONS

Key words: monopole mass analyzer, mass peak shape, ion reflection.

Methodology and results of calculations of mass peak shape of monopole mass analyzer considering reflected ions from field-creating electrodes are described and comparison with experimental results is made 61

N.M. Vereshchagin, A.E. Korolev, V.V. Vasilev, K.V. Shemarin. RESEARCH OF CORONA DISCHARGE BLOWER

Key words: blower, electric wind, corona discharge, air velocity.

This article describes the device pumping air by electric wind. Its main characteristics are given. It is shown that increasing the number of discharge electrodes in corona discharge blower leads to air velocity increase 64

N.N. Bisyarin, E.Ya. Chernyak, S.S. Volkov. EXPERIMENTAL ION MOBILITY SPECTROMETRY WITH ION SOURCE BASED ON CONTINUOUS CORONA DISCHARGE

Key words: ion mobility spectrometry, drift tube, ion mobility.

The results of experimental studies of the characteristics of ion mobility spectrometer with an ion source based on corona discharge are published. The influence of electric field in the region of ion drift and duration of injection pulse on sensitivity and resolution of the spectrometer are considered. The effect of flow rate of drift-gas intensity of ion peak is investigated. The research to detect test impurities in the air is accomplished.....68

V.S. Gurov, P.I. Kuksa. HYPERBOLOID SYMMETRIC ENERGY ANALYSER WITH CONE END ELECTRODE

Key words: electron and ion optics, energy analyser.

The results to calculate the parameters of axisymmetric hyperboloid energy analyser with one end electrode are given. Geometry and ion-optic scheme of energy analyser are represented. Dependencies of different parameters influence on energy resolution and aperture ratio as well as efficiency parameter are developed.....73

J.V. Tcherkasova, A.S. Ivanikov. RESEARCH OF THERMAL INSTABILITY OF MICROOVERHANGS ON THE SURFACE OF HIGH-VOLTAGE VACUUM MAGNETOCONTROLLED CONTACTS

Key words: thermal instability, cathode microledge, vacuum magnetooperated contact, Nottingam's effect, field emission.

The correct solution of a task on heating of a model cathodic microledge is provided. The computer model of cathode microledges thermal instability development in time is developed.....76

A.P. Avachev, T.G. Avacheva, N.V. Vishnyakov, Y.V. Vorobyov, V.V. Gudzev, M.V. Maltsev, N.B. Rybin. STUDIES OF GE-SB-TE FILMS THICKNESS WITH X-RAY ANALYSIS AND ATOMIC FORCE MICROSCOPY

Key words: chalcogenide vitreous semiconductors, phase transitions, phase memory, thin films, atomic force microscopy, scanning electron microscopy, energy dispersive X-ray microanalysis, X-ray fluorescence analysis.

The technique to determine elemental composition and thickness of $\text{Ge}_2\text{Sb}_2\text{Te}_5$ thin films is investigated. Procedure is based on mathematical treatment of data on peak intensities of characteristic X-ray irradiation of the material exposed by X-rays. The calculation results are confirmed by the profile of the film obtained using atomic force microscope.....79

P.I. Lazarenko, S.A. Kozyukhin, A.A. Sherchenkov, V.G. Litvinov, A.V. Ermachikhin, H.F. Nguyen, E.N. Redichev. ELECTRICAL PROPERTIES OF $\text{Ge}_2\text{Sb}_2\text{Te}_5$ AMORPHOUS THIN FILMS DOPED WITH Bi

Key words: phase memory, electrical properties, doping bismuth, $\text{Ge}_2\text{Sb}_2\text{Te}_5$.

The influence of doping Bi on electrical properties of $\text{Ge}_2\text{Sb}_2\text{Te}_5$ amorphous thin films: resistivity, phase transition temperature, activation energy of conductivity and carrier transport mechanisms was investigated.....83

A.E. Chizhikov, A.A. Kormashova. STUDY OF THE POSSIBILITY FOR QUALITY CONTROL OF FILM MgO PLASMA PANEL THROUGH ITS RESISTANCE

Key words: electrode system of plasma panel, MgO film, secondary ion-electron emission ratio, specific surface resistance, volume resistivity.

A device and measurement technique of MgO film resistance is developed, volume resistance of structure is investigated and also the surface resistance of front plate layers of plasma panel is given. The volume resistivity of MgO - fusible glass - substrate structure is defined by the resistance of glass substrate in the main and makes $(3...5) \cdot 10^{12}$ Ohms·m.

Surface resistance of not annealed MgO film on glass is about $1 \cdot 10^{14}$ Ohm. After annealing the surface film resistance in MgO - fusible glass - substrate structure increases by more than two orders. The possibility of film resistance measurement in finished structure for quality control is shown.87

T.A. Kholomina. APPLICATION OF NANOTECHNOLOGIES IN MEDICINE

Key words: nanotechnology, nanocomplexes, diagnostics, therapy.

The analysis and synthesis results of modern ideas, engineering and trends in the development of nanotechnological methods to introduce into the organism of the patient nanocomplexes for the diagnosis and therapy of various diseases, as well as biochemical means, performing local physical effects on cellular level are presented.....92

O.G. Poddubskaya, N.I. Volynets, I.A. Bochkov, P.P. Kuzhir, S.A. Maksimenko, E.Yu. Baturkina, O.A. Gorlin. POLYMER COMPOSITES BASED ON CARBON NANOTUBES IN MICROWAVE APPLICATIONS

Key words: composite nanotube, carbon, resistance, multi-barrier.

We investigated thermal properties of polymer composites based on multi-walled carbon nanotubes. A study also conducted composites resistivity. High mechanical properties of composites based on carbon nanotubes were noted.100

Ya. Matsutkevich, O.G. Poddubskaya, I.A. Bochkov, P.P. Kuzhir, S.A. Maksimenko, S. Belluchchi, A.Ya. Klochkov. NANOSTRUCTURED MATERIALS BASED ON CARBON NANOTUBES WITH REMOTELY CONTROLLED PROPERTIES UNDER ELECTROMAGNETIC RADIATION INFLUENCE

Key words: nanostructured material, carbon nanotubes.

The analysis of composite dielectric materials on the basis of multiwall carbon nanotubes and epoxy was conducted. Strong influence on the composition of composite thermal properties of its dielectric constant was revealed. After several heating and cooling cycles the presence of hysteresis of complex permittivity of composite materials with inclusions of multiwall carbon nanotubes was experimentally confirmed, the possibility to control remotely electromagnetic properties of the material by application of external electromagnetic field was stated.103

P.N. Dyachkov, V.A. Zaluev, A.A. Skuntsev, D.V. Suvorov, G.P. Gololobov, O.A. Gorlin. THE INFLUENCE OF SPIN - ORBIT INTERACTION ON ELECTRONIC STRUCTURE AND POLIIN COMMULENE CARBYNES

Key words: carbine, nanotubes, Fermi level, augmented cylindrical waves.

In this paper, we propose a new method for calculating ab initio electronic structure carbines taking into account the effects of spin-orbit interaction. The method is illustrated with calculations of states splitting at Fermi level in commulene and poliin carbines that have semiconducting and metallic electronic structure, respectively. Inclusion of these interactions leads to the formation of 2-3 meV cracks110

E.V. Slivkin. EXPERIMENTAL RESEARCH TO PURIFY SILICON BY THE METHOD OF EXTRACTION FROM SOLID STATE

Key words: Boron, phosphorus, diffusion, silicon, analysis, spectrometry.

The pilot plant produced several prototypes of silicon, which were subsequently analyzed by spark mass spectrometry and scanning electron microscopy with energy dispersive microanalysis-top box. The requirements to technological regimes of purification leading to acceptable time and cleaning efficiency are achieved. A connection between the relations obtained in the course of mathematical modeling and experimental results is made.114
